

P1 has Numbering 36 to 1 compared to P11 on the MAIN Board. That's because it's meant for the other end of the flat cable.

This board also has an area with not placed items:
P2, 36 pin ribbon connector
R1..R4
U1, U2, opto-isolators

The area has connection with pins 1 and 2 of P1 and so to P11 pin 35 and 36 on the main board.

Reversed schematic, values of C's not determined
