

## System Requirements

### 1、 NET framework 3.5 SP1

The application you are installing requires the Microsoft .NET framework version 3.5 (or greater) to run.

1.1 .Net Framework was installed on the machine when installing Windows 7(64 bits) or Windows Vista(64 bits) and therefore does NOT require downloading. Follow next steps to use it:

- a、 Open control panel,select Uninstall Program.
- b、 Select Open or Close Windows Functions in the new window.
- c、 Check Microsoft .Net Framework in the Windows Functions Dialog box, click OK button.

### 1.2 Other versions of Windows

You can download the [Microsoft .NET Framework 3.5 SP1](#) package directly from Microsoft. This is a small 3 MB download with just the .NET framework installer. When you run it, the installer downloads the actual framework components that need to be installed on your computer. Once you've installed the .NET framework, you can continue installing the application.

If you plan to install version 3.5 of the .NET framework on a large number of computers, you can also download the [full package of the Microsoft .NET Framework 3.5 SP1](#). This 231 MB download comes directly from Microsoft. The small 3 MB installer likely needs to download much less than this, depending on what is already present on your computer.

## 2、NiVisa

Before use this software, you have to install the ni-visa runtime library. You can find it in the installation folder or you can download it from NI web site.
